Gender And Diversity In Science

CECAD presents

Neurodivergence in Science and Society:

How to be well and how to work with us

The talk introduces Neurodiversity and explores how Neurodivergence shapes everyday and professional life. It highlights how Neurodivergent brains may process information differently, particularly in sensory perception and hypersensitivity, organization and structuring of thoughts, motivation, and stress responses and their physical impact.

The session highlights practical implications, including strategies for Neurodivergent people and ways in which colleagues and working environments can become more inclusive and responsive. The session will conclude with dedicated time for questions and discussion. Everyone who is interested in the topic is warmheartedly invited to join.

About the Speaker:

Katharina Voller holds an M.A. in American, English & German Studies. She gained diverse professional experience as an assistant publishing editor, file clerk, and expat in Canada, the US, and China. In 2025, she founded K.E.E. Coaching as a certified Neurodiversity and Systemic Coach, with a focus on counselling, life and career coaching for Neurodivergent adults. She offers multiple perspectives on Neurodivergence: As a late diagnosed Neurodivergent woman herself, as a mother of two Neurodivergent sons, as a professional coach and counsellor.

Time: Tuesday, June 30 | 14:00
Venue: CECAD Lecture Hall |
